# SFP-M1513L-02

## **Optical SFP Module**

155Mbps SFP Transceiver MM 1310nm 2km LC

50

### **Features**

- Up to 155Mbps data links
- 1310nm FP(LED) laser and photo PIN detector for 2km transmission
- Compliant with SFP MSA and SFF-8472 with Duplex LC receptacle
- Digital Diagnostic Monitoring: Internal Calibration or External Calibration
- +3.3V single power supply
- Compatible with RoHS
- Operating case temperature:

Standard :0 to +70° C

Industrial : -40 to +85 $^{\circ}$  C

## **Application**

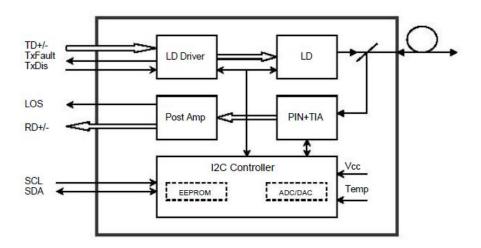

- SDH and SONET system
- Fiber Channel
- Switch to Switch interface
- Switched backplane applications
- Router/Server interface
- Other optical transmission systems

## **Description**

The SFP transceivers are high performance, cost effective modules supporting 155Mbps and 2km transmission distance with MMF.

The transceiver consists of three sections: a FP laser transmitter, a PIN photodiode integrated with a trans-impedance preamplifier (TIA) and MCU control unit. All modules satisfy class I laser safety requirements.

The transceivers are compatible with SFP Multi-Source Agreement (MSA). For further information, please refer to SFP MSA.

## **Absolute Maximum Ratings**

| Parameter           | Symbol | Min | Мах | Unit |
|---------------------|--------|-----|-----|------|
| Supply Voltage      | Vcc    | 0   | 4   | V    |
| Storage Temperature | Ts     | -40 | +85 | °C   |
| Operating Humidity  | -      | 5   | 85  | %    |

## **Recommended Operating Conditions**

| Parameter                  |            | Symbol | Min  | Typical | Мах  | Unit |
|----------------------------|------------|--------|------|---------|------|------|
| Operating Case Temperature | Standard   | Тс     | 0    |         | +70  | °C   |
|                            | Industrial |        | -40  |         | +85  | °C   |
| Power Supply Voltage       |            | Vcc    | 3.13 | 3.3     | 3.47 | V    |
| Power Supply Current       |            | lcc    |      |         | 300  | mA   |
| Data Rate                  |            |        |      | 155     |      | Mbps |

#### Notes:

1. The optical power is launched into MMF.

2. PECL input, internally AC-coupled and terminated.

3. Measured with a PRBS  $2^{7}$ -1 test pattern @1250Mbps, BER  $\leq 1 \times 10^{-10}$ .

4. Internally AC-coupled.

## **Timing and Electrical**

| Parameter  | Symbol         | Min | Typical | Max | Unit |

| LOS De-assert Time                                 | t_loss_off     |     |         | 100 | μs   |
| Serial ID Clock Rate                               | f_serial_clock |     |         | 400 | KHz  |
| MOD_DEF (0:2)-High                                 | V <sub>H</sub> | 2   |         | Vcc | V    |
| MOD_DEF (0:2)-Low                                  | VL             |     |         | 0.8 | V    |

## **Diagnostics**

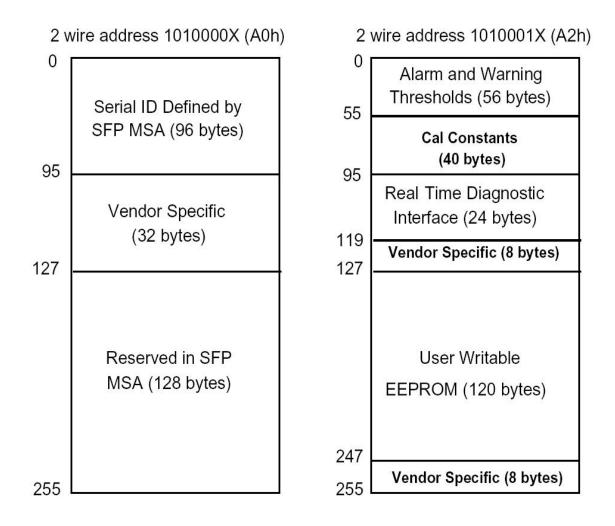

| Parameter    | Range      | Unit | Accuracy | Calibration         |  |
|--------------|------------|------|----------|---------------------|--|
| Temperature  | 0 to +70   | °C   | ±3°C     | Internal / External |  |
| Temperature  | -40 to +85 | 0    | 10 0     |                     |  |
| Voltage      | 3.0 to 3.6 | V    | ±3%      | Internal / External |  |
| Bias Current | 0 to 100   | mA   | ±10%     | Internal / External |  |
| TX Power     | -14 to -8  | dBm  | ±3dB     | Internal / External |  |
| RX Power     | -24 to -3  | dBm  | ±3dB     | Internal / External |  |

## **Digital Diagnostic Memory Map**

The transceivers provide serial ID memory contents and diagnostic information about the present operating conditions by the 2-wire serial interface (SCL, SDA).

The diagnostic information with internal calibration or external calibration all are implemented, including received power monitoring, transmitted power monitoring, bias current monitoring, supply voltage monitoring and temperature monitoring.

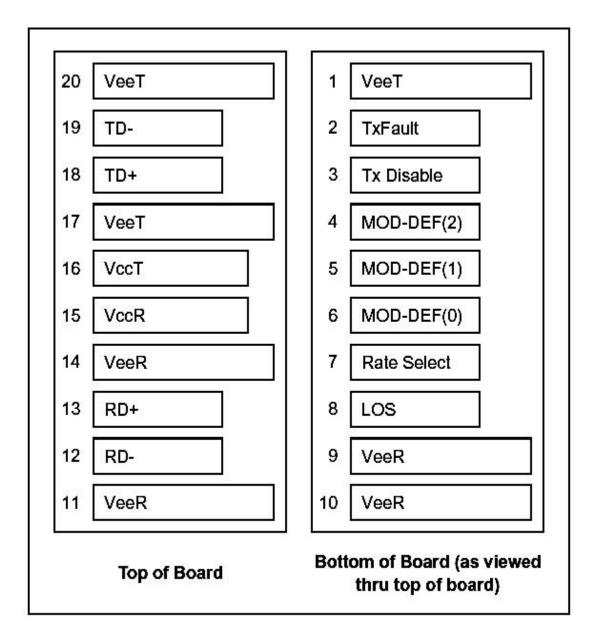

The digital diagnostic memory map specific data field defines as following.

#### Notes:

Plug Seq.: Pin engagement sequence during hot plugging.

 TX Fault is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor on the host board to a voltage between 2.0V and Vcc+0.3V. Logic 0 indicates normal operation; Logic 1 indicates a laser fault of some kind. In the low state, the output will be pulled to less than 0.8V.

2) TX Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a  $4.7k \sim 10k\Omega$  resistor. Its states are:

| Low (0 to 0.8V):      | Transmitter on       |
|-----------------------|----------------------|
| (>0.8V, < 2.0V):      | Undefined            |
| High (2.0 to 3.465V): | Transmitter Disabled |
| Open:                 | Transmitter Disabled |

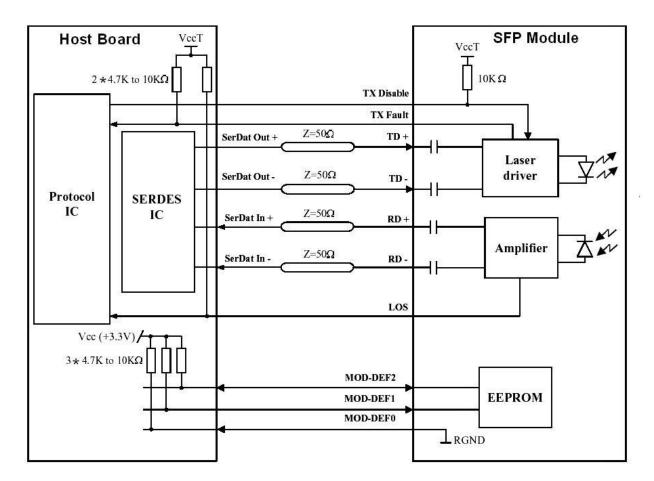

Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7k~10kΩ resistor on the host board. The pull-up voltage shall be VccT or VccR.
Mod-Def 0 is grounded by the module to indicate that the module is present

Mod-Def 1 is the clock line of two wire serial interface for serial ID

Mod-Def 2 is the data line of two wire serial interface for serial ID

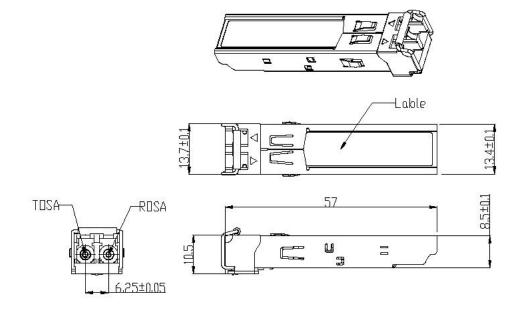

4) LOS is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor. Pull up voltage between 2.0V and Vcc+0.3V. Logic 1 indicates loss of signal; Logic 0 indicates normal operation. In the low state, the output will be pulled to less than 0.8V.

- 5) RD-/+: These are the differential receiver outputs. They are internally AC-coupled 100 differential lines which should be terminated with 100Ω (differential) at the user SERDES.
- 6) TD-/+: These are the differential transmitter inputs. They are internally AC-coupled, differential lines with 100Ω differential termination inside the module.

#### **Recommended Interface Circuit**

## **Mechanical Dimensions**

## **Ordering information**

| Model No.      | Product Description                                 |
|----------------|---|
| SFP-M1513L-02  | 155Mbps, 1310nm, LC, 2km, 0° C ~ +70° C, with DDM   |
| SFP-M1513L-02I | 155Mbps, 1310nm, LC, 2km, -40° C ~ +85° C, with DDM |
